

Transforming Process with Automation.

**The DRIVE Deployment Framework
A Free Guide to Deploy Technology Enhancements
July 2025**

By Mike G Robinson

DRIVE Delivery Framework

The DRIVE delivery framework is a free, customed framework designed to deploy technology enhancements into your business. Made for agility and based on Agile methodologies, this is a trimmed down version of a traditional SDLC project customizable with a central 'function'. EVOLVE.

Use it as a guide, adopt it as your own deployment framework or duplicate parts.

- D** **Discover** Discover, identify, fund, concept, approve
- R** **Readiness** Design, test, data prep, brand prep, champions
- I** **Implement** Deploy, migrate data, user testing, processes
- V** **Validate** Support, document, change mgt, training
- E** **Evolve** Monitor, plan, authorize, report, strategize

The framework consists of four phases with a 'floating' phase or function (EVOLVE) that controls and monitors the four delivery phases as depicted below.
